PARENTING

The Intentional Parent: A Complete Guide

Attachment, discipline, emotional coaching, screen time & resilience

Dr. Hala Ali
Mama Hala Consulting

Attachment, Discipline, Emotional Coaching, Screen Time & Resilience

Foreword

Dear Parent,

If you're reading this, you care. That might sound obvious, but I want you to hear it clearly, because the parents who seek out guides like this one are almost never the ones who need to be told to try harder. You're already trying. You're already showing up. You're reading this because you want to do it well — not perfectly, but intentionally.

I've spent years working with families across cultures and continents — in Ottawa, in Dubai, online — and if there's one truth I've seen confirmed over and over, it's this: there is no single right way to raise a child. But there are principles that work. Principles grounded in research, tested by real families, and flexible enough to fit your values, your culture, and your child's unique temperament.

This guide is built on those principles. It draws from attachment theory, cognitive behavioral approaches, emotional intelligence research, and the practical wisdom that comes from sitting with hundreds of families as they navigate the hardest and most rewarding job in the world.

You won't agree with everything in here — and that's fine. Take what resonates. Adapt what needs adapting. Leave what doesn't fit. The goal isn't to follow a script. The goal is to parent with awareness, warmth, and intention.

Your children don't need you to be perfect. They need you to be present, connected, and willing to grow alongside them.

With warmth and respect,

Dr. Hala Ali Founder, Mama Hala Consulting

Part 1: Attachment-Based Parenting

Understanding the Foundation of Every Relationship Your Child Will Ever Have

What Is Attachment and Why Does It Matter?

Attachment is the emotional bond between a child and their primary caregivers. It's not about how much you love your child — every parent reading this loves their child. It's about how your child *experiences* that love. Do they feel safe? Do they trust that when they're scared, sad, or overwhelmed, someone will be there? Do they believe, deep in their bones, that they are worthy of care and attention?

That felt sense of safety — that's attachment. And it shapes everything.

Children with secure attachment tend to:

- Have healthier relationships throughout life
- Manage stress and emotions more effectively
- Perform better academically (not because they're smarter, but because they can regulate themselves enough to learn)
- Develop stronger empathy and social skills
- Show greater resilience when life gets hard

Attachment isn't destiny. A child with insecure attachment isn't broken, and a child with secure attachment isn't immune to struggle. But attachment is the foundation — the emotional home base from which your child explores the world.

The 4 Attachment Styles — Explained Simply

Attachment research has identified four main patterns. These aren't permanent labels — they're descriptions of relational patterns that can shift with awareness and effort.

1. Secure Attachment

What the child learned: "When I need you, you're there. I can trust you. The world is generally safe."

What it looks like:

- The child explores freely but checks back in with their caregiver
- When upset, they seek comfort and are able to be soothed
- They can tolerate some frustration without falling apart
- They show a range of emotions openly

How it forms:

- Consistent, responsive caregiving (not perfect — consistent)
- The parent reads the child's cues and responds with warmth
- Repair happens after ruptures (you get it wrong, you come back and make it right)

2. Anxious/Ambivalent Attachment

What the child learned: "Sometimes you're there, sometimes you're not. I can't predict it. I need to cling to make sure you don't disappear."

What it looks like:

- The child is clingy, distressed by separation, hard to soothe even when the parent returns
- They may seem "needy" or overly dependent
- Big emotional reactions to small disruptions
- Difficulty self-soothing

How it forms:

- Inconsistent caregiving — warm and present sometimes, distracted or unavailable other times
- The child can't predict when their needs will be met, so they amplify their signals

3. Avoidant Attachment

What the child learned: "When I show my needs, you pull away. It's safer not to need anyone."

What it looks like:

- The child seems unusually independent, even as a toddler
- They don't seek comfort when upset (but their stress hormones are still elevated — they just hide it)
- They may seem "easy" or "low-maintenance," but they've learned to suppress their needs
- In older children: emotional distance, difficulty asking for help

How it forms:

- Caregivers who are uncomfortable with emotion, dismiss crying, or encourage independence too early
- The message (often unintentional): "Big kids don't cry. Handle it yourself."

4. Disorganized Attachment

What the child learned: "The person who's supposed to protect me is also the person who scares me. I don't know what to do."

What it looks like:

- Contradictory behavior — approaching the parent while looking away, freezing, or showing confusion
- Difficulty with emotional regulation
- May appear anxious, controlling, or unpredictable

How it forms:

- Often associated with caregivers who are frightening, frightened, or severely unpredictable
- The child faces an impossible dilemma: the source of safety is also the source of fear

A note about these styles: If you recognize yourself or your child in the insecure patterns, this is not an indictment. Most adults carry some insecure attachment from their own childhoods. The fact that you're reading this — learning, reflecting, wanting to do differently — is itself a powerful step toward change.

How to Strengthen Attachment at Any Age

Attachment isn't only formed in infancy. You can strengthen the bond with your child at any stage.

Infants and Toddlers (0-3 years)

- Respond to crying promptly and warmly — you cannot spoil a baby
- Make eye contact during feeding, changing, and play
- Narrate your actions: "I'm going to pick you up now. I can see you're upset."
- Follow their lead during play — let them direct, you follow
- Practice skin-to-skin contact and physical closeness
- Be predictable: consistent routines create safety

Young Children (3-7 years)

- Spend 15-20 minutes daily in child-led play (no teaching, no correcting — just being present)
- Name their emotions: "It looks like you're feeling frustrated."
- Validate before redirecting: "I understand you're angry. AND it's not okay to hit."
- Be consistent with boundaries — children feel safer when limits are clear
- Repair after conflict: "I'm sorry I yelled. That wasn't okay. How are you feeling?"

School-Age Children (7-12 years)

- Show up for what matters to them (the soccer game, the school play, the thing they're excited about)
- Ask open-ended questions: "What was the best part of your day?" not "How was school? Fine."
- Respect their growing need for privacy and independence while staying connected
- Create rituals: bedtime talks, weekend adventures, a weekly one-on-one outing
- Let them see you manage your own emotions well

Teenagers (13-18 years)

- Keep showing up, even when they push you away — they need you more than they'll admit
- Listen more than you lecture — they can tell the difference
- Respect their autonomy while holding firm on safety
- Share your own struggles (age-appropriately) — it builds trust
- Stay curious about their world: their music, their friends, their interests
- The repair conversations matter even more now: "I handled that badly. Can we talk about it?"

The Power of Repair

Here is the most important thing about attachment: **it's not about getting it right every time. It's about what you do after you get it wrong.**

Every parent-child relationship has ruptures — moments of disconnection, misunderstanding, frustration, or failure. That's normal. What matters is the repair.

Repair looks like:

- Coming back after you've calmed down and saying, "I'm sorry. I shouldn't have reacted that way."
- Acknowledging your child's experience: "I can see that scared you when I raised my voice."
- Taking responsibility without making excuses: "I was stressed, but that's not your fault."
- Asking what they need: "What would help you feel better right now?"

Repair teaches your child that relationships can survive conflict, that people who love you will come back, and that it's safe to be imperfect.

Part 2: Discipline Without Damage

Why Punishment Backfires — and What to Do Instead

The Problem with Punishment

Let's be clear: discipline is necessary. Children need boundaries, limits, and guidance. Without them, children feel anxious, not free.

But discipline and punishment are not the same thing.

Punishment is about making a child pay for what they did. It relies on fear, pain, or shame to control behavior. It might "work" in the short term — the behavior stops — but it doesn't teach the child anything useful about why the behavior was wrong or what to do instead.

Discipline comes from the Latin word "disciplina," meaning to teach. Real discipline helps a child understand what went wrong, develops their internal sense of right and wrong, and preserves the relationship while still holding the boundary.

Why punishment backfires:

- It damages trust and the parent-child relationship
- It teaches children to avoid getting caught, not to make better choices
- It escalates over time (you have to punish harder to get the same effect)
- It models the very behavior you're trying to stop (anger, aggression, power-over)
- It doesn't address the root cause of the behavior

Natural vs. Logical Consequences

Instead of punishment, use consequences — the kind that teach.

Natural consequences happen on their own. You don't create them; you allow them (as long as the child is safe).

- Child refuses to wear a coat -> Child feels cold
- Child doesn't eat dinner -> Child feels hungry later
- Child doesn't do homework -> Child faces the teacher's response

Your role: Resist the urge to rescue. Be empathetic, not punitive. "I see you're cold. Next time, what do you think you might do differently?"

Logical consequences are created by the parent, but they're directly connected to the behavior.

- Child throws a toy -> Toy is removed for a set time
- Child misuses screen time -> Screen time is reduced
- Child speaks disrespectfully -> Conversation pauses until they can try again

The test for a good logical consequence:

1. Is it **related** to the behavior?
2. Is it **respectful** (not shaming)?
3. Is it **reasonable** (proportional)?
4. Is it **revealed in advance** (the child knew the boundary)?

If you can say yes to all four, it's discipline. If not, it might be punishment dressed up as a consequence.

The ABC Model: Antecedent — Behavior — Consequence

When your child's behavior is challenging, look at the full picture, not just the behavior itself.

A — Antecedent (What happened before?)

- Was the child hungry, tired, or overstimulated?
- Was there a transition they weren't prepared for?
- Were expectations unclear?
- Was there an unmet need driving the behavior?

B — Behavior (What exactly happened?)

- Describe the behavior specifically (not "he was bad" but "he hit his sister when she took his toy")
- How frequent, intense, and long-lasting is this behavior?

C — Consequence (What happened after?)

- What was your response?
- Did the consequence teach something, or just punish?
- Did the behavior get the child something they wanted (attention, escape from a task)?

Using the ABC model helps you see that behavior is communication. A child who acts out is telling you something. Your job is to figure out what — and address the root, not just the symptom.

Scripts for Common Situations

Tantrums (Ages 2-6)

What's happening: The child is overwhelmed by emotion and doesn't have the brain development to manage it yet. This is not manipulation — it's a nervous system that's overloaded.

What to say:

- "I can see you're really upset right now. I'm going to stay right here with you."
- "It's okay to feel angry. It's not okay to throw things. I'll help you when you're ready."
- "You wanted that toy and the answer was no. That's really frustrating."

What to do:

- Stay calm (your regulation is their regulation)
- Get low — eye level
- Don't try to reason during the storm; wait for it to pass
- After it's over: "That was a big feeling. What happened?"

Lying (Ages 4-10)

What's happening: Young children lie because they're developing imagination, wish-thinking, or fear of punishment. Older children lie to avoid consequences or to fit in.

What to say:

- "I already know what happened. I'm not asking to trick you — I'm giving you a chance to tell me the truth."
- "In this family, we can handle the truth. You won't get in trouble for being honest."
- "It sounds like you wish that's what happened. Can you tell me what really happened?"

What to do:

- Make honesty safe — if truth-telling always leads to punishment, lying is rational
- Praise courage: "Thank you for telling me the truth. I know that was hard."
- Address the underlying behavior separately from the lying

Sibling Conflict

What's happening: Siblings compete for resources, attention, and status. Some conflict is normal and even healthy — it teaches negotiation and compromise.

What to say:

- "It sounds like you both want the same thing. How can we figure this out?"
- "I'm not going to decide who's right. I'm going to help you both work it out."
- "It's okay to be angry at your brother. It's not okay to hurt him. Use your words."

What to do:

- Avoid taking sides or playing judge
- Teach conflict resolution skills rather than solving it for them
- Give each child individual attention so they're not always competing
- Don't compare siblings — ever

Defiance (Ages 6-16)

What's happening: Defiance is often a sign of a child testing autonomy, feeling powerless, or experiencing an unmet need. Sometimes it's developmentally appropriate (especially in toddlers and teens).

What to say:

- "I hear that you don't want to do this. Help me understand why."
- "This isn't optional, but I want to hear what's going on for you."
- "I can see you're frustrated. Let's figure out a way to make this work for both of us."
- "You can be angry about the rule. The rule still stands."

What to do:

- Pick your battles — not every act of defiance needs a confrontation
- Offer choices within limits: "You need to do your homework. Would you like to do it before or after dinner?"
- Acknowledge their feelings without caving on the boundary
- Check your own tone — are you inviting cooperation or demanding compliance?

Part 3: Emotional Coaching

Teaching Your Child the Language of Feelings

Why Emotional Intelligence Matters

A child who can name their emotions, understand what triggers them, and express them appropriately has a superpower. They're better equipped for friendships, school, romantic relationships, and careers. They're less likely to develop anxiety, depression, or behavioral problems. They recover faster from setbacks.

And here's the encouraging part: emotional intelligence isn't something children are born with or without. It's something they learn — primarily from you.

The Emotion Coaching 5-Step Process

This model, grounded in research on emotionally intelligent parenting, gives you a step-by-step approach for responding to your child's emotions.

Step 1: Notice the emotion. Pay attention to the subtle signals — withdrawal, clinginess, aggression, a change in tone. Don't wait for a meltdown.

Step 2: See the emotion as an opportunity. When your child is upset, your instinct might be to fix it, minimize it, or make it stop. Instead, see it as a teaching moment — a chance to connect and coach.

Step 3: Validate the feeling. "I can see you're really sad about this." "It makes sense that you'd feel angry." "That sounds really scary."

Validation isn't agreement. You're not saying the behavior is okay. You're saying the feeling is real and understandable.

Step 4: Help them name it. "It sounds like you're feeling disappointed." "I wonder if you're feeling left out." "That looks like frustration to me — is that right?"

Naming an emotion is the first step to managing it. When we label a feeling, it moves from the reactive emotional brain to the thinking brain, where we can process it.

Step 5: Set limits and problem-solve. "It's okay to feel angry. It's not okay to hit. What else could you do when you feel that way?"

This is where discipline and emotional coaching meet: you hold the boundary while still honoring the feeling.

Age-Appropriate Emotional Vocabulary

Teaching your child to name their emotions starts with giving them the words.

Ages 2-4: The Basics Happy, sad, mad, scared, tired, hungry, excited, frustrated

Activities:

- Use picture books to point out emotions in characters
- Make faces together: "This is my happy face. Can you show me your sad face?"
- When they're emotional, offer words: "You look mad. Are you mad?"

Ages 5-7: Expanding the Range Worried, jealous, embarrassed, disappointed, proud, lonely, nervous, surprised, confused, grateful, brave, annoyed, overwhelmed

Activities:

- Create a feelings chart together and put it on the fridge
- Play "feelings charades" — act out emotions and guess
- At dinner, each person shares one feeling from the day and what caused it

Ages 8-12: Nuance and Complexity Anxious, humiliated, insecure, resentful, guilty, ashamed, hopeful, content, nostalgic, conflicted, inspired, overwhelmed, inadequate, defensive, vulnerable

Activities:

- Talk about mixed emotions: "Have you ever felt happy and sad at the same time?"
- Discuss characters in movies or books: "Why do you think she did that? What was she feeling?"
- Normalize complexity: "It's okay to feel two things at once. That's called being human."

Ages 13-18: Self-Awareness and Regulation Existential anxiety, identity confusion, alienation, self-doubt, passionate, conflicted loyalty, righteous anger, grief, compassion fatigue, emotional numbness, desire for autonomy

Activities:

- Have honest conversations about your own emotions (age-appropriately)
- Respect when they don't want to talk — but stay available
- Ask questions that invite reflection: "What do you think that feeling is trying to tell you?"

The Difference Between Validating and Permitting

This is the single most misunderstood concept in emotional coaching, so let's be crystal clear:

Validating = acknowledging the feeling is real and okay. "I understand you're angry that we have to leave the park."

Permitting = allowing the behavior that comes from the feeling. "It's fine, go ahead and scream and throw sand."

You can do the first without doing the second. In fact, you must.

The formula: **"I understand you feel [emotion]. AND [the boundary still holds]."**

- "I understand you're frustrated. AND we still need to share."
- "I can see you're angry. AND hitting is not an option."
- "I know you're disappointed. AND the answer is still no."

The "AND" is important. Not "but" — which erases everything before it. "AND" holds both truths at the same time.

Part 4: Screen Time Strategies

Evidence-Based Approaches That Actually Work

The Reality of Screens

Screens are not going away. Your child will grow up in a digital world. The question isn't whether they'll use technology — it's whether they'll use it wisely.

The research is clear on a few things:

- Excessive screen time in young children is associated with language delays, sleep problems, and reduced attention
- Content matters far more than raw screen time — educational, interactive content is very different from passive scrolling
- The real damage often isn't the screen itself — it's what the screen replaces (physical activity, family interaction, sleep, imaginative play)
- Social media has a measurably negative impact on adolescent mental health, particularly for girls

But the research is also clear that technology can be wonderful: educational content, creative tools, connection with distant family, assistive technology for children with disabilities. The goal isn't elimination — it's intentional, guided use.

Evidence-Based Guidelines by Age

Under 18 months: Avoid screens except for video calls with family members. Babies learn from real-world interaction, not screens.

18-24 months: If you introduce screens, choose high-quality, slow-paced, educational content. Watch together and talk about what you see. Limit to brief periods.

Ages 2-5: Limit to 1 hour per day of high-quality programming. Co-view whenever possible. Avoid screens in the hour before bedtime.

Ages 6-12: Establish consistent limits. Focus on balance — screen time shouldn't crowd out physical activity, homework, family time, or sleep. Start conversations about online safety and digital citizenship.

Ages 13-18: Negotiate reasonable limits together — teens respond better to collaboration than control. Monitor social media use and its impact on mood. Keep devices out of bedrooms at night. Model healthy technology use yourself.

The Family Media Agreement

Complete this together as a family. Everyone signs — including parents.

Our Family Media Agreement

Screen-free zones in our home:

- ☐ Dinner table
- ☐ Bedrooms
- ☐ Car (for short trips)
- ☐ Other: _____

Screen-free times:

- ☐ During meals
- ☐ After _____ PM on school nights
- ☐ The first _____ minutes after school
- ☐ During homework
- ☐ Other: _____

Daily screen time limits:

- Weekdays: _____ hours
- Weekends: _____ hours
- These limits include/exclude (circle): educational content, video calls, music

Our rules about social media: _____ _____

Our rules about gaming: _____ _____

What happens if the agreement is broken: _____

Signed by:

_____ Date: _____

_____ Date: _____

_____ Date: _____

_____ Date: _____

Review date (revisit this agreement every _____ **months):** _____

---

10 Screen-Free Activity Ideas

When your child says "I'm bored" and reaches for a device, try these instead:

1. **Build something** — forts, Lego, birdhouses, sandcastles, cardboard cities
2. **Cook together** — even young children can wash vegetables, stir batter, and assemble sandwiches
3. **Nature scavenger hunt** — make a list of things to find outdoors and go exploring

4. **Art station** — set up paper, markers, glue, scissors, and recycled materials. No instructions. Just create.
5. **Read aloud** — even older children enjoy being read to. Take turns reading chapters.
6. **Board games or card games** — classic family bonding
7. **Write letters** — to grandparents, to future selves, to friends in other cities
8. **Gardening** — plant seeds, water them, watch them grow. Great for patience and responsibility.
9. **Movement challenges** — obstacle courses, dance parties, yoga, backyard sports
10. **Storytelling** — start a story and take turns adding to it. Record it if you want — oral storytelling is ancient and powerful.

How to Have the Screen Time Conversation Without Conflict

Don't: Take away the device in the middle of a game, lecture about brain rot, use screen time as a weapon.

Do:

- Give advance warning: "You have 10 more minutes, then it's time to switch."
- Use when/then language: "When you finish your homework, then you can have screen time."
- Be curious, not critical: "What are you watching? Tell me about it."
- Acknowledge their world: "I know this is important to you. Help me understand."
- Model what you're asking: If you're on your phone during dinner, the family media agreement means nothing.
- Focus on what they're gaining, not just what they're losing: "I love seeing you build things / spend time outside / read."

Part 5: Building Resilient Children

The 7 C's of Resilience — and How to Nurture Each One

Resilience isn't about toughness. It's not about teaching children to "suck it up" or "deal with it." True resilience is the ability to bend without breaking, to recover from setbacks, and to grow through adversity — not despite the hard things, but because of how they learned to navigate them.

The 7 C's framework, developed in pediatric resilience research, provides a practical map for building this capacity in children.

---

1. Competence

What it means: The ability to handle situations effectively. Children who feel competent believe they can manage challenges.

How to build it:

- Let your child do things for themselves — even when it's slower and messier
- Focus on effort, not outcome: "You worked so hard on that" rather than "You're so smart"
- Avoid rescuing them from every struggle — tolerate their discomfort
- Give age-appropriate responsibilities: chores, packing their own lunch, managing their homework schedule
- Celebrate progress, not perfection

Try this: Choose one task your child currently relies on you for. This week, teach them to do it independently. Stay nearby, but let them lead.

Task: _____

What happened: _____

---

2. Confidence

What it means: The belief in one's own abilities. Confidence comes from demonstrated competence — not from empty praise.

How to build it:

- Praise specifically: "The way you solved that math problem by trying three different approaches showed real persistence" (not just "good job!")
- Let them try and fail — and show them that failure isn't the end of the story
- Avoid doing things for them that they can do for themselves
- Highlight character strengths: "You showed real kindness when you helped your friend"
- Create opportunities for mastery — sports, music, art, coding, cooking, anything they can get progressively better at

---

3. Connection

What it means: Close ties to family, friends, school, and community that provide a sense of security and belonging.

How to build it:

- Make time for one-on-one connection with each child regularly
- Eat meals together as often as possible
- Know your child's friends and their families
- Create family traditions and rituals
- Encourage involvement in community — religious, cultural, volunteer, or recreational groups
- Stay connected through transitions: moves, divorces, school changes

---

4. Character

What it means: A strong sense of right and wrong, and the courage to act on it.

How to build it:

- Talk about values explicitly: "In our family, we value honesty / kindness / respect / courage"
- Point out moral dilemmas in stories, movies, and real life — discuss them together
- Model integrity — children learn more from what you do than what you say
- Allow natural consequences when they make poor choices
- When they do the right thing, especially when it's hard, name it: "That took real character"
- Expose them to diverse perspectives and experiences

---

5. Contribution

What it means: The understanding that the world is a better place because they're in it.

How to build it:

- Involve children in acts of service — volunteering, helping neighbors, donating to causes
- Give them meaningful roles in the family: "We need you to be in charge of setting the table. That's your contribution."
- Help them see how their actions affect others: "When you shared with your sister, did you see how her face changed?"
- Talk about purpose: "What matters to you? What do you want to make better in the world?"
- Model generosity and community involvement

---

6. Coping

What it means: Having a repertoire of healthy strategies for managing stress, disappointment, and difficult emotions.

How to build it:

- Teach specific coping strategies: deep breathing, counting, taking a break, talking it out, physical activity, journaling
- Help them build a "coping toolbox" — a list of things that help when they're upset
- Model your own coping: "I'm feeling stressed, so I'm going to take a walk to clear my head"
- Don't eliminate all stress from their lives — they need practice
- Differentiate between healthy coping (exercise, talking, creating) and unhealthy coping (avoidance, aggression, withdrawal)

- After a difficult experience, process it together: "That was hard. What helped you get through it?"

My child's coping toolbox:

1. _____
2. _____
3. _____
4. _____
5. _____

---

7. Control

What it means: The understanding that they have the power to influence outcomes through their decisions and actions.

How to build it:

- Give choices whenever possible: "Would you like to start with reading or math?"
- Help them see the connection between their actions and outcomes
- Teach them to break big problems into smaller, manageable steps
- When they feel helpless, ask: "What's one thing you CAN control in this situation?"
- Avoid over-controlling their lives — children who never make decisions never learn to trust themselves
- Help them distinguish between what they can and can't control

---

Part 6: Worksheets & Reflection Exercises

Worksheet 1: My Parenting Values Reflection

The kind of parent I want to be (3-5 words):

_____

The values I most want to pass on to my children:

1. _____
2. _____
3. _____
4. _____
5. _____

The parenting approach I grew up with:

_____

_____

What I want to keep from how I was raised:

_____

What I want to do differently:

_____

When I'm at my best as a parent, I am:

_____

When I'm at my worst as a parent, I am:

_____

The trigger that most often brings out my worst parenting:

One thing I'm going to work on this month:

Worksheet 2: Weekly Connection Planner

Use this weekly. Plan one intentional connection moment with each child.

Week of:

Child's Name	Connection Activity	When	How It Went

What I noticed this week about my child(ren):

Moments of connection that happened naturally (unplanned):

One thing I want to carry into next week:

Worksheet 3: Discipline Decision Tree

Use this when your child's behavior is challenging. Walk through each step before responding.

Step 1: What happened? (Describe the behavior specifically)

Step 2: What came before? (Was the child tired, hungry, overwhelmed, provoked?)

Step 3: What is the child trying to communicate? (Attention, autonomy, unmet need, overwhelm?)

Step 4: Is this a safety issue? [ ] Yes (intervene immediately) [ ] No (proceed to Step 5)

Step 5: What response will TEACH something?

- [ ] Natural consequence (let reality be the teacher)
- [ ] Logical consequence (related, respectful, reasonable)
- [ ] Emotional coaching (validate, name, set limits, problem-solve)
- [ ] Redirect (offer an alternative behavior)
- [ ] Take a break (both of you) and come back to it

Step 6: What did I actually do?

Step 7: How did it go? What would I do differently next time?

Worksheet 4: Family Screen Time Agreement

(An expanded version of the agreement in Part 4)

Our family's screen time values: We believe technology should be: _____

We believe technology should NOT be: _____

Individual screen time limits:

Family Member	Weekday Limit	Weekend Limit	Favorite Content	Concerns

Screen-free zones: _____

Screen-free times: _____

Social media rules: _____

Gaming rules: _____

What we'll do instead of screens:

1. _____
2. _____
3. _____

Consequences for breaking the agreement:

_____

We'll review this agreement on: _____

Family signatures:

_____

Worksheet 5: Resilience Building Action Plan

For each of the 7 C's, identify where your child is strong and where they need support.

Child's name: _____ **Age:** _____

C	Current Strength (1-5)	One Thing I'll Do to Build This
Competence		
Confidence		
Connection		
Character		
Contribution		
Coping		
Control		

My child's greatest resilience strength:

The area that needs the most attention:

My plan for the next 30 days:

Week 1:

Week 2:

Week 3:

Week 4:

How I'll know it's working:

A Final Note

Parenting is the only job where you're expected to be an expert from day one with no training, no manual, and a tiny human who didn't read any of the same books you did.

You will mess up. You will lose your patience. You will say things you regret. You will wonder if you're doing it all wrong.

And then you'll repair. You'll try again. You'll show up the next morning and make breakfast and drive carpool and listen to the same story for the fourteenth time — and in doing so, you'll teach your child the most important lesson of all: that love is not about perfection. It's about presence.

That's intentional parenting. And you're already doing it.

If you'd like personalized support for your family, Mama Hala Consulting offers family counseling, parenting coaching, child and adolescent therapy, and parent-child communication workshops — in English and Arabic, in Ottawa, Dubai, and online.

Book a consultation: mamahala.ca **Email:** info@mamahala.ca

You're not doing this alone. And you don't have to.

Ready for Personalized Support?

Your first conversation is free — 30 minutes, no pressure. Let's explore how counseling can help you and your family thrive.
